

Adarsh Patel

Full Stack Engineer — React JS · Node Js · Javascript · Python

adarshaldkar@gmail.com — +91 7010664806 — Puducherry, India — [LinkedIn](#) — [GitHub](#) — Open to Relocate:Anywhere

Summary

Final-year ECE student with strong **Python, SQL, and OOP fundamentals**, experienced in designing data-driven systems, distributed pipelines, REST APIs, and scalable backend architectures. Built real-world projects involving time-series databases, geospatial analytics, and containerized microservices. Odoo Hackathon Finalist (**Top 78 / 19,000+ participants**).

Technical Skills

Languages	Python [Proficient] , JavaScript / TypeScript [Expert] , C++ , SQL
Frontend	React.js · Next.js · HTML5 · CSS3 · Tailwind CSS · Redux
Data & Databases	PostgreSQL · SQL Data Modeling · InfluxDB (Time-Series) · MongoDB · Prisma ORM
Backend & System Design	OOP · REST APIs · Node.js · Express.js · Flask · Microservices · MQTT
DevOps & Tools	Docker · Docker Compose · GitHub Actions · AWS · Grafana · Linux · Postman

Experience

Planarc — Full Stack Engineer Intern	Jul 2025 — Nov 2025
- Delivered 25+ reusable React components across 4 core product flows following OOP and component-driven design patterns, cutting duplicated UI code by ~40%. - Optimized lazy-loading and bundle-splitting, reducing initial page load from ~3.2s to 2.4s (25% improvement) on mid-range devices. - Refactored 3 backend API modules and authored API contracts in an Agile environment, reducing cross-team integration bugs noticeably.	

Projects

VibeCoder — AI-Powered Browser IDE	GitHub
---	------------------------

Next.js · TypeScript · OOP · WebContainers · Ollama · MongoDB · Prisma

- Architected a modular OOP-based full-stack IDE using WebContainers — users run React, Next.js, and Express projects fully in-browser with zero server-side execution.
- Integrated local LLM (CodeLlama via Ollama) into Monaco Editor for real-time AI completions; implemented Google/GitHub OAuth with session persistence via Prisma ORM.
- Followed SDLC principles — scoped features iteratively, wrote modular services with clear separation of concerns, tested edge cases across file system and auth flows.

NoiseSense — Distributed Real-Time Noise Monitoring System	GitHub
---	------------------------

Python · MQTT · Docker · InfluxDB · Flask · Grafana · OOP

- Designed a 3-service distributed pipeline using OOP principles in Python — Android client, MQTT consumer, and Flask API — each independently deployable via Docker Compose.
- Implemented robust error handling, retry logic, and threshold calibration using 80+ real-world samples; exposed geospatial analytics through REST endpoints.

EduPulse — Student Feedback & Analytics Platform	Live - GitHub
---	---

React · Node.js · Express · MongoDB · JWT · RBAC · Vercel

- Built a role-based (Admin/Student) platform with JWT auth, shareable form links, and analytics dashboard — reduced manual feedback collection effort by **70%**.
- Implemented SDLC phases end-to-end: requirements, modular design, iterative development, and deployment with CI integration on Vercel + Render.

Achievements

- Odoo Hackathon 2025** — Finalist, Top 78 out of 19,000+ participants.
- Unisys Innovation Program 2025 (UIP-2025)** — Ranked 24th out of 8,000+ projects.
- LeetCode** — Solved 400+ problems; strong across arrays, trees, graphs, DP, and sliding window.

Education

Manakula Vinayagar Institute of Technology, Puducherry	Oct 2022 — May 2026
B.Tech — Electronics and Communication Engineering	CGPA: 7.7 / 10
Vivekanandha Higher Secondary School	2020 — 2022
12th Standard (Computer Science): 85%
